Introducción

En el presente trabajo se verá el diseño del proyecto SAES para Alumnos en manera de diagramas. La aplicación para móviles fue desarrollada para el sistema operativo Android para aportar movilidad al sistema SAES.

Pre-requisitos de instalación

Hardware

- Sistema operativo Android 5.0 "Lolipop" o superior.
- 4MB de almacenamiento.
- 1GB de RAM

Frameworks y estándares

- Android
 - En [1] se define como un software de código abierto centrado en dispositivos móviles y también otro tipo de dispositivos.
- Kotlin
 - En [2] se define como un lenguaje de programación de código libre y de tipado estático que soporta los paradigmas de programación orientada a objetos y la programación funcional. Tiene una sintaxis y conceptos parecidos a otros lenguajes como C#, Java y Scala.
- Material Design
 - Según [3] es un Sistema de Diseño creado por Google que proporciona u manera de crear interfaces de usuario hermosas y usables para diseñadores y desarrolladores.

Diagramas

Diagrama de paquetes

El siguiente diagrama de paquetes muestra la organización de paquetes y la dependencia entre ellos.

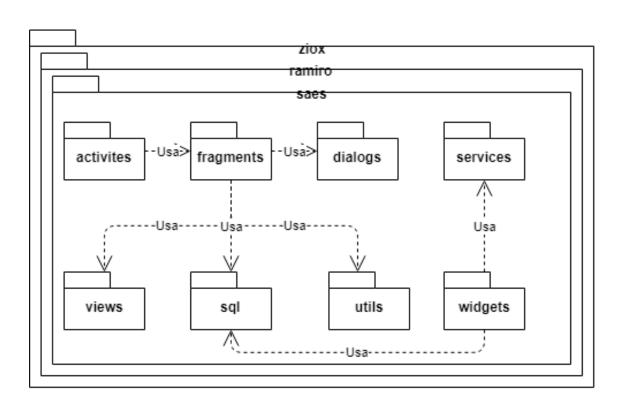

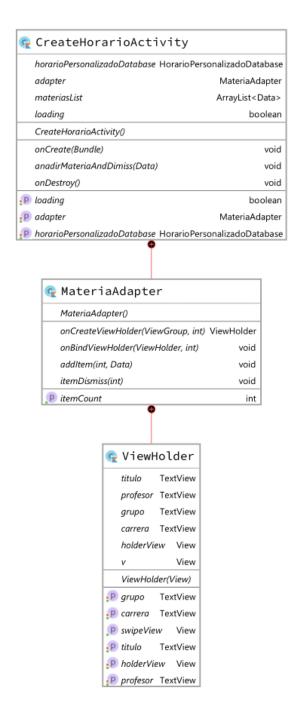

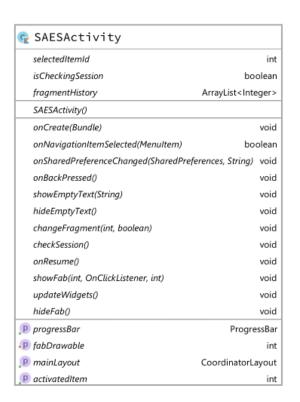

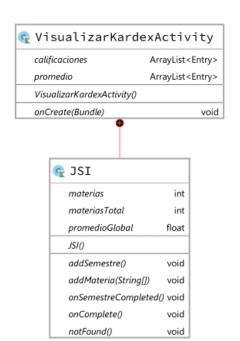

Diagrama de clases

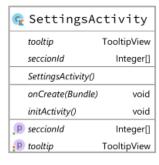

Los siguientes diagramas organizados por paquetes presentan las clases del proyecto y sus clases internas.
